# Service for Checkweighers & Metal Detectors

## Reduce Giveaway

In order to maximize profits, you need your checkweigher to be running as smoothly and as accurately as possible. An inaccurate machine or a breakdown could cost you dearly.

Getting your checkweigher properly serviced on a regular basis by a fully-trained Sartorius engineer helps to prevent your checkweigher from drifting away from the nominal weight in addition to other calibration issues.

The accuracy of your checkweigher is important because it can mean the difference between profit or loss. For example, assuming that your line is running at 70% efficiency over two 8-hour shifts, a product that costs £2.00 per kg will cost you £3,360 per day if you are giving away just 1g in overfill based on an average of 250 weighings per minute.

Despite appearing to run smoothly, your checkweigher might not be running accu-

rately. Accuracy depends on a number of factors including the calibration parameters being set-up correctly with a dynamic calibration check as well as certain mechanical factors such as having the rollers and motors etc. being properly tuned and synchronised.

Keep your checkweigher running accurately and smoothly with a Sartorius Service Agreement. For increased peace of mind, customers with a Service Agreement in place enjoy priority response times from our engineers in the event of a failure.

## Compliance With Regulations?

Do you meet the requirements of due diligence? Is your product free from foreign body contamination?

Routine preventative maintenance and calibration of your metal detectors illustrates to the authorities that you have taken the necessary

steps to ensure your product complies with retailers' specifications.

## Did You Know?

Sartorius has a wealth of expertise with other equipment including:

- Laboratory balances and Moisture analysers
- Batch processing systems
- Vessel and Belt weighing
- Industrial scales
- X-Ray
- Safety weighing cabinets
