

Is your vessel calibration...

Vessel Calibration – from the experts

...costing you time and money?

SNICA

Using SNICA (Sartorius Non-Intrusive Calibration Apparatus), we can offer a reliable, time and cost efficient method for vessel calibration.

Benefits

The benefits of using our SNICA system include:

- No use of valuable water or waste-water to dispose of (saving on those hidden costs)
- Virtually negates manual handling and working at height
- Both mechanical and electronic systems are tested – not just the indicator

- No need to empty and clean out the vessels (saving on those hidden costs)
- Minimising production downtime (saving on those hidden costs)
- 1kg accuracy if required
- Non-Intrusive – no need to break into or modify production systems
- Full ATEX approved system
- The unit is self-contained with no need for external power

Using adapter plates the SNICA can accommodate all shapes, capacities and sizes of vessels. This will be assessed at a pre-calibration survey. **Turn overleaf to find out how to order your SNICA vessel calibration.**
